

Intersolar 2024: The future as an Independent Power Producer

Iqony Sens showcases its expanded business area for the first time at the world's leading trade fair for the solar industry

Munich. From project developer to one of Europe's leading producers of energy from renewables: At Intersolar, the world's leading trade fair for the solar industry in Munich, the newly established Renewables business unit of Iqony, the green growth division of the Essen-based STEAG Group, was unveiled for the first time. Effective June 1, the solar and wind businesses were merged to form Iqony Sustainable Energy Solutions (Iqony Sens).

"Combining our many years of experience and strong positioning in the solar industry with Iqony's wind expertise enables us to respond even more efficiently and effectively to the challenges of the market," says André Kremer, Managing Director of Iqony Sens and previously responsible for the solar business at Iqony. Joël Wagner, also Managing Director of Iqony Sens and previously responsible for the wind business, adds: "The aim of the new business unit is to make greater use of synergies across the entire wind and PV value chain and increasingly position ourselves on the market as an Independent Power Producer (IPP) with access to all technologies.

Keen interest in reorganization

The repositioning met with keen interest from customers, partners and service providers at Intersolar. "As an integrated system operator and energy producer, we are going to develop and market even more projects for our own portfolio in future," André Kremer emphasized. In addition to project development, the generation of energy from renewables and the supply of electricity to households and businesses will also be a focus.

The Iqony Sens stand in Hall A4 was extremely well attended on both days of the trade fair. In numerous expert sessions, the Iqony Sens team was available to visitors for professional dialogs, current industry insights and technical questions. One of the main topics was the future of the solar industry and, in particular, the opportunities and challenges in the development of new business models.

Renewables join forces

Intersolar takes place annually at the Munich trade fair center as part of The smarter E Europe, Europe's largest trade fair alliance for the energy industry. The focus is on renewable energies, decentralization and digitalization of the energy industry as well as cross-industry solutions from the electricity, heating and transport sectors for an intelligent and sustainable energy supply.

"It became clear at the trade fair that the industry is increasingly moving closer together and linking various technologies. In addition to the issues specific to solar energy, wind-related aspects also played a major role – from asset management and system optimization to services relating to the planning and marketing of green wind power," Joël Wagner emphasizes. This increasing convergence of renewables, including battery storage systems, offers great potential and is an excellent basis for the new Iqony Sens.

About Iqony Sens

Iqony Sens - Iqony Sustainable Energy Solutions - develops, builds and operates renewable energy facilities throughout Europe as an Independent Power Producer (IPP) and EPC service provider. Iqony Sens acts as an IPP in the solar and wind sectors. The EPC and O&M division (Engineering, Procurement, Construction plus Operations & Maintenance) covers both the construction and maintenance of the company's own solar and wind energy plants and also offers customers turnkey solar farm solutions. We are actively and passionately committed to the expansion of sustainable projects in order to shape the future with 100% good energy. Iqony Sens is headquartered in Würzburg. The company also has subsidiaries in France, Greece, the UK, Italy, the Netherlands, Poland, Portugal and Spain. The company employs over 430 people at more than a dozen locations in Europe. The renewable energy specialist is a wholly-owned subsidiary of Essen-based Iqony GmbH.

About Iqony

Iqony makes green energy feasible. With many years of relevant experience in the planning, construction and operation of energy facilities, the company provides holistic solutions for the decarbonization, decentralization and digitalization of the energy supply. Iqony focuses on renewable energies and bridging technologies that can be used in a climate-neutral way now and in the future. In addition to solar, wind and geothermal energy, the portfolio includes hydrogen solutions, storage technologies, engineering services and gas-fired power plants. Around 2,300 employees worldwide implement projects for major industrial companies, utilities, cities and municipalities in numerous countries across the globe. Specializing in tailor-made solutions for complex challenges, Iqony draws on its broad and in-depth knowledge of the energy industry across the full range of technologies and services.
