

Iqony supports Swiss Federal Administration

Federal Office of Energy plans energy reserve for Switzerland

Bern/Essen. To safeguard the power supply in cases of extraordinary energy shortage, Switzerland is planning to create a supplementary energy reserve with a capacity of up to 1,000 megawatts (MW). In the planning and implementation of this reserve, the Swiss Federal Administration will be supported by the energy experts of Iqony Solutions GmbH.

The future energy reserve is to consist of reserve power plants, emergency power groups and combined heat and power (CHP) plants. These plants are not usually in operation, but are available if the power supply can no longer be ensured by the regular power plants alone.

Iqony Solutions with successful bid

The Swiss Federal Office of Energy issued a public invitation to tender for the preparation of the tender documents, the implementation of the tendering process and the evaluation of the bids received. The contract was awarded to Iqony Solutions GmbH.

“We are very proud that the Swiss Federal Administration has placed its trust in Iqony Solutions and that we can now also use our expertise in the field of gas and thermal power plants to secure Switzerland’s energy supply,” says Dr. Jens Reich, who is responsible for the project at Iqony Solutions.

Energy experts and decarbonization specialists

“The contract award underlines Iqony’s comprehensive engineering and energy business expertise. We are very pleased to have the opportunity to support the Swiss Federal Administration in this important project. Thanks to our broad expertise and experience, we at Iqony are able to offer our customers individual solutions from a single source along the entire value chain of the energy industry,” says Dr. Ralf Schiele, COO of Iqony, who is responsible for “Markets and Technology” on the management board.

About Iqony

Iqony makes green energy feasible. With more than 85 years of experience in the planning, construction and operation of energy facilities, the company provides holistic solutions for the decarbonization, decentralization and digitalization of the energy supply. Iqony focuses on renewable energies and bridging technologies that can be used in a climate-neutral way now and in the future. In addition to solar, wind and geothermal energy, the portfolio includes hydrogen solutions, storage technologies, engineering services and gas-fired power plants. Around 2,300 employees worldwide implement projects for major industrial companies, utilities, cities and municipalities in numerous countries across the globe. Specializing in tailor-made solutions for complex challenges, Iqony draws on its broad and in-depth knowledge of the energy industry across the full range of technologies and services.

About Iqony Solutions

Iqony Solutions provides customized responses to the challenges of the energy transition. As a partner for all the issues related to decarbonization and digitalization, we support our customers with engineering expertise. Drawing on decades of experience gained in the design, construction and operation of more than 100,000 megawatts (MW) of power plant capacity worldwide and the operation and maintenance of complex energy facilities, we provide all the services along the energy industry value chain. Our digital solutions for monitoring, analyzing and optimizing generation plants provide special added value for increased efficiency.

Our work focuses on the wishes and requirements of our customers, who are at home in more than 80 countries across the globe. Our international team, consisting of people from more than 30 nations, does its utmost for them every day.

We are experts in generation from all conceivable energy sources. This broad and in-depth command of energy technology ensures greater efficiency and thus less consumption of resources in power and heat generation. That helps to reduce emissions and costs. In this way, our daily efforts not only protect the climate and the environment, but also enable our customers to optimize their business operations.
